

## Explore common breaches and defenses of Internet security (MP3).

In reality, the Internet has brought together millions of computers in all shapes, sizes and power to form a huge, worldwide network of interconnected computers that enable their users to communicate, collaborate, conduct business and share information.

### Caution

No doubt the Internet does great things and can hardly not be used, but its' use has to be with extreme caution because virtually wherever you go on the Internet, bad things lurk in the shadows.

**After completion of this mission plan, you should be able to:**

- Describe the basic functionality of the Internet.
- Describe the attacks on your personal computer that come from the Internet.
- Define the strategies that can be used to minimize the risk of using the Internet.
