

What is a Private Branch Exchange (PBX)?

A PBX is a telephone system within an enterprise that switches calls between enterprise users on local lines while allowing all users to share a certain number of external phone lines.

What is a Key System?

A key system is a multiline telephone **system** typically used in business environments, encompassing **systems** ranging from small **key** telephone **systems** to large-scale private branch exchanges.

[en.wikipedia.org/wiki/Business\\_telephone\\_system](https://en.wikipedia.org/wiki/Business_telephone_system)

What are the benefits of these systems?

- Allows for internal phone calls to be made with each other without the need to interface with the PSTN.
- Not as costly as an enterprise solution such as VoIP and CUCM.
