

# LEARNING PLAN 10

## Finance

A company is a collection of assets, but the way those assets work to create value for customers and profit for a company depends on how well they are put to work. A company's business model is its plan of action

for using its assets to create cash flow and profit. However, it takes considerable entrepreneurial and managerial skills to decide how to put assets to their most highly valued use - to maximize company profitability.

Michael Eisner's initial decisions about how to employ Disney's assets were successful, but his subsequent failures show how complex and uncertain financial decision making is.
